WORK EXPERIENCE

TechIT – Jersey City, NJ

Full Stack Developer

June 2013 - Present

Techit (www.techitjc.com) is my computer repair and web services company. Client projects include developing web pages, multiplatform servicing (hardware & software), open source contributions and business network design.

- Upgraded websites. HTML → Jekyll → RoR. Responsive framework/design
- CSS and jQuery editor. JavaScript feature developer. HTML page creator
- UI and Frontend collaborations
- SCRUM AGILE practices and TDD development procedures
- Maintain TechIT's web presence - Facebook, Github, Domain, Marketplace Accounts
- Software developed: Timesheet Management, Invoice streamlining, Employee Dashboards

Quest Global - Windsor, CT

Software Engineer

February 2019 - Present

- Qlik, Sharepoint, VBA and Javascript Developer
- Organize disparate data sources into single data models
- Identify customer needs and work collaboratively to address requirements
- Identification and documentation of process and data quality issues within business processes, data feeds, and client interface
- Install QlikView software including QlikView Server / Publisher
- Establish positive relationships with customers (internal and external)
- Assist Client with QlikView Server integration issues
- Analyze, assess and implement data and business processes, and identify data quality issues within those business processes
- VBA and Python automator for multiple internal functions & reports
- Integrate 3rd party software into QlikView applications
- Validation of solutions, as well as end-to-end processes, by testing programs and validating results
- Project and schedule and milestones, and publishing of progress reports
- Web Development - Intranet programs for specialized military users (back and front end)
- Present Cost & Deliverable reports to CEO of Pratt & Whitney
- Develop creative solutions for client problems
- Implementation of solutions, including training and support of client personnel
- Development, Production, and Maintenance Documentation for VBA and Python automation programs

Parts Valuation Engineer

December 2018 - February 2019

- Analyzed blueprint schematics for engine parts and designed them within Siemens NX
- Wrote a program to compare the production of goods with SOW requirements via BOM big data analytics
- Ensured the STL design matched perfectly with specifications, applied a choice of specific material and processing, and gave a summation of what the parts will cost along with the processing estimate
- Fixed bugs and wrote documentation for a massive costing model written in VBA
- Added a Visual Basic feature to existing excel projects to ease user flow
